 EXOTIC

EXOTIC *Bamboo*

Bamboo.

Renewable, sustainable and sensible... a smart choice for our world today... and our world tomorrow.

As recognition of the benefits of eco-friendly material choices increase, Apple Valley Woodworks is pleased to offer the wood species Bamboo as an optional wood choice. Apple Valley Woodworks' 3-ply plywood Bamboo doors and drawer fronts are both FSC and LEEDS certified. Bamboo is available on our standard high quality box, our optional plywood box, or our optional LEEDS certified cabinet box.

What is Bamboo?

Bamboo, a member of the grass family, is the fastest growing timber plant on earth. It has a mature growth cycle of 3 to 6 years, compared to 10 to 20 years for many softwoods, and 30 to 60 years for some hardwoods.

Why is Bamboo considered environmentally friendly?

Bamboo is a hardy plant that requires no fertilizers or insecticides to grow. It is capable of producing more oxygen than a similar size grove of trees. It has been estimated that a small bamboo forest is capable of reducing the temperature in its immediate environment by up to 10 degrees.

Why Bamboo for cabinetry applications?

- Structural integrity
- Great durability
- Strong aesthetic appeal
- Contemporary, transitional as well as traditional styling capabilities
